KENDEL'S Seeds Plants Bulbs

NOW LOCATED

AT

208 Prospect Ave.

BETWEEN EAST SECOND AND

EAST FOURTH STREETS

95 YEARS IN BUSINESS 1937

208 PROSPECT AVE., CLEVELAND, OHIO

C. E. KENDEL, President

Foreword

We again call attention to our new, convenient location at

208 PROSPECT AVENUE

between East Second and Fourth Streets and opposite The May Co.

Things being what they are, we think it proper to stress more than ever this year, the importance of planting *reliable* Garden Seeds, such as we have handled for the past 95 years. *Take no chances*. Only the best seeds can make the best gardens. This is evidenced by numerous customers of many years' standing.

OUR TERMS ARE NET CASH

OUR PRICES—We will adhere as closely as possible to the prices quoted in this Catalogue, but the market value of some seeds is variable. This includes the grass and clover seeds, field seeds and onion setts and these will be quoted upon request.

ORDERS—Please furnish credit references if you do not remit with order.

ADDRESS, Etc.—When ordering, be sure that your NAME, POSTOFFICE, COUNTY and STATE plainly appear in your letter and whether you prefer to have us ship by mail, express or freight, otherwise we will ship cheapest way.

REMITTANCES may be made at our risk, by check, draft, P. O. or express money order, or in sums of \$2.00 or less by registered mail. Unused postage stamps to the amount of \$1.00 will be accepted.

RATES OF POSTAGE

SEEDS BY MAIL—In justice to our many customers who live in this immediate vicinity and are not obliged to consider postage and express charges, we do not include such charges in the prices quoted in our catalogue; the prices given are for goods here in our store. We will continue, however, to mail free all SEEDS in packets and ounces to any amount, any where in the U. S. at catalogue prices. In larger packages, we will mail free in the FIRST, SECOND and THIRD ZONES, all VEGETABLE and FLOWER SEEDS, ROOTS and BULBS to the amount of ONE DOLLAR or over. On lesser amounts, please add 10% to cover postage or at least 8c for the first pound, which is the minimum charge, otherwise we will be obliged to deduct for postage. Beyond the THIRD ZONE please add postage according to the distance. On account of their perishable nature PLANTS should be shipped by express only.

BAGS ARE FURNISHED AT THE FOLLOWING RATES: Pecks, 10c; half-bushels, 20c; one bushel, 30c; two bushel, 50c each. In remitting for orders please add a sum to cover the cost of the necessary bags.

WARRANTS

WARRANTS—We buy our stocks from reliable dealers, some of them for more than sixty years. We make germination tests of each lot of Vegetable Seeds that we offer, thus reducing to a minimum the chances for failure. Our Flower Seeds are always of the new crop and thus of the highest vitality. But we wish to make it clearly understood that because circumstances may arise after seeds are planted, over which we have absolutely no control, we find it necessary as is customary in the Seed Trade to give no Warranty, express or implied, as to description, quality, purity, productiveness, or any other matter of any Seeds, Plants or Bulbs we send out, and will not be responsible in any way, for the crop. If the purchaser does not accept the goods on these terms, they are to be returned at once.

A. C. KENDEL'S SEED STORE.

NEW SEEDS OF MERIT

New Ageratum, Blue Cap. A compact, dwarf, large-flowering, deep blue sort especially suitable for borders and rock-gardens	Pkt. \$.25
New Calendula, Sunshine. Chrysanthemum-flowered, golden yellow; a new form of the popular Calendula or Pot Marigold, growing large flowers on two-foot stalks	.15
New Double Dwarf Nasturtium "Golden Gleam." This outstanding novelty will be welcome wherever Nasturtiums are grown. The plants are vigorous growers and produce until frost, semi-double, fragrant golden yellow flowers, on long stems that almost hide the foliage. Nasturtiums require only ordinary soil. Per packet	\$.15
New Marigold "Guinea Gold." Flowers are orange yellow, flushed with gold, 2 to 21/2	•
inches across, more loosely formed and less pungent than the older types. Excellent cut flower. Packet	.15
New Petunia, Rose of Heaven. A deeper shade of pink than the well known bushy, Rosy Morn petunia	.15
Petunia, Dwarf Giant Ramona. A dwarf fringed bedding strain, particularly suitable for borders because the stems do not lop over. The size of blooms and the	.10
color range leave nothing to be desired. Packet	.59
New Verbena, Beauty of Oxford Hybrids. Giant flowers in shades of rose-pink and	15
rose-red	.15
Rock Garden Annuals. A mixture of a great many dwarf growing annuals that bloom the first year.	10
Rock Garden Perennials. A choice mixture of many dwarf growing hardy plants, that	.10
bloom the second year and thereafter	.10
New Snapdragon "Majestic." This type produces compact heads with the flowers touching each other. The color range is quite complete, including the delicate autumn shades. Considered the choicest strain of Snapdragon yet produced. Avalanche. Snowy white. Eldorado. Deep golden yellow. Twilight. Apricot, shaded yellow. Red Chief. Rich, deep scarlet. Superb Mixed. All colors.	
Any of above per packet	.15
Marigold, French Single Dwarf Orange. The tiny border plant that has recently come into wide use for its continuous showy blooms, remaining until frost. Known also as Tagetes and Mexican Marigold. Golden yellow with orange star in the center	.10
Godetia. Azalea flowered, cherry red. Free flowering, tall strain; brilliant color.	.10
Packet	.15
Larkspur. A new strain, branching from the bottom making it desirable for cutting. Carmine King. Deep carmine rose	.15 .15
SUPLEMENTAL LIST. REGULAR LIST BEGINNING PAGE 15

442. Zinnia, Lilliput. Crimson, orange, yellow or mixed. Each	
445. Centaurea Macrocephala. Giant yellow low	.10
but much larger	.10

LAWN GRASS SEED

E have for many years given particular attention to lawn grasses that would make a thick sod, withstanding the heat of summer and the cold of winter under the many varying conditions of soil, shade, and location and feel free to say that it takes several different kinds to meet all conditions and no one kind or even mixture will be suitable everywhere. We have four different mixtures as enumerated below, that will pretty well meet the needs of everyone in this part of the country. Shadilawn should be sown very early in the spring, before the leaves on the trees cast much shade; all our other mixtures may be sown either spring or fall. The most important part of lawn-making is to use plenty of good seed, suitable for the purpose. You will get some kind of a lawn with good seed even if the soil is poor or the conditions bad but with poor seed, never, no matter what else you do. It takes experts to tell the difference before the seed is sown but

not when it comes up. Barnyard manure is not suitable to use on a lawn on account of the weeds that are sure to follow. Top soil that is not infested with Crab Grass or Chick Weed is hard to find and expensive to use. The safest way is to rake in a liberal amount of Sheep Manure and Bone Meal, half and half, as much as a pound of each per square yard and each spring, when the grass is showing green put on more bone meal at the rate of a pound to 5 x 10 feet and you will not only settle the weed trouble but have that nice, thick sod that everyone desires and so few have. On sandy soil a dressing of Peat Moss on top of the seed will greatly increase the catch and conserve the moisture as well as the fertilizer, without choking out any of the lawn.

There is a great diversity of opinion in regard to watering. Frequent watering tends to encourage the grass roots to stay near the surface. They should grow down, the deeper the better. Therefore the less watering is done the less is necessary and then when a drought comes a good soaking will be more effective. Set the mower so the grass will be left longer in July and August as a protection from the heat and clip as short as you like the rest of the time. To leave or not to leave the mowings on the lawn is another controversial question. It seems logical to advise the use of the grass catcher if there are any weeds because some of our worst weeds, notably Crab Grass which turns the lawn so brown in August, are annuals that could be controlled if the seed was gathered. Dandelion heads should certainly be gathered. From September on, the cuttings might be left as a winter protection, but raked out as early as possible in the spring.

LAWN GRASS SEED

This is our well known and increasingly popular mixture of Grass Seeds that will actually make a lawn, no matter how shady nor what makes the shade. Sown early, before the leaves on the trees get started, it will come up promptly and stay all summer. Under Maples and Elms, it is well to put on a light sowing of fertilizer three or four times during the season and a good soaking, when necessary, due to the demands of the tree roots, which usually fill the ground and will cause any grasses to succumb, but in most shady places, SHADI-LAWN will survive better than any other. 1 lb. 50c; 3 lbs. \$1.40; 5 lbs. \$2.25; 10 lbs. \$4.00; 20 lbs. **\$8.00**; 100 lbs. **\$37.50**.

LAWN GRASS SEED

This is the same mixture of grasses that we have sold for fifty years with utmost satisfaction. Nothing but the highest grades and cleanest seeds are used. A pound sows 10×20 feet of bare ground. Price: 1 lb. 40c; 3 lbs. \$1.25; 5 lbs. \$2.00; 10 lbs. \$3.50; 20 lbs. \$7.00; 25 lbs. and over $32\frac{1}{2}c$ per lb.

CREEPING BENT MIXTURE

In some localities a tough grass is required that will withstand rough treatment. On This Putting Greens it has been found that the Bent Grasses best meet the conditions. mixture has a liberal proportion of Bent Grass seed and will give that fine tough sod so much desired. A pound sows 15 x 20 feet. Price: 1 lb. 90c; 3 lbs. \$2.50; 5 lbs. \$4.00; 10 lbs. \$6.50; 25 lbs. and over **60c** per lb.

"DO WELL" LAWN SEED

A mixture of lower priced grass seeds, equally clean but intended for back yards, or for temporary uses. 1 lb. 35c; 3 lbs. \$1.00; 10 lbs. \$3.00; 25 lbs. and over 25c per lb.

GRASS SEEDS

We carry a full supply of bulk grass seeds, Kentucky Blue and Canadian Blue, Fancy Red Top, White Dutch Clover, Bent Grasses, Fescue Grasses, Timothy, Poa Trivialis-all of the highest grades, thoroughly cleaned and all showing their purity and germination. Prices on application.

Vegetable Seeds

In ordering seeds to be sent by mail, please read what we say under "SEEDS BY MAIL" on the inside front cover page.

ASPARAGUS

Asparagus seed is much sown to supply foliage for cut flowers, but for the vegetable, two year old	
roots are used, which are ready in March.	
An armos of good will make about 200 plants

MARY WASHINGTON.	This variety is superseding all other	er			
sorts	·····	\$.05	\$.15	\$.50	\$1.50

BEANS—Dwarf or Bush—(Bush Bohnen)

Beans need more space than is usually believed—at least two inches apart in the rows. Being tender, none should be planted before middle of May, but successive plantings may be made until beginning of August. Unless the garden, through long use is well supplied with the proper legume bacteria, a 35c Composite bottle will inoculate all the Beans, Peas and Sweet Peas you will probably sow and will many times repay the trouble in larger yields. Bean Rust disease is aggravated if beans are cultivated when wet.

One pound will plant 50 feet of row.

CAULIFLOWER—(Blumenkohl)

The weather has more to do with success in raising Cauliflower than almost any other vegetable. If it is cool, good heads may be expected, if not, the crop will be more or less of a fallure, anything but the very best seed however, invites failure from the very outset. Because the price of seed runs into large figures is a very poor reason for trying to save a dollar on the seed. The crop is what you want and no poor seed will ever produce a good crop of anything except trouble and disappointment.

One ounce will produce 3000 plants.

Plants ready in May		¼ Oz.	¹⁄₂ Oz.	Oz.

Early Snowball. Dwarf and compact; very reliable for heading.	.15	.75	1.25	2.50

CELERY—(Sellerie)

One important factor in raising celery from seed is to have the seed bed fine and the seed firmly packed down when it is sown, a half inch deep. Next it is necessary to keep it growing—a check in growth is sure to be followed by hollow celery. In the garden, plants which are ready in June, may be set out four inches apart between alternate rows of early corn, affording necessary shade at the start. After the corn is pulled the stalks should be removed to let the celery grow. Plant only the best plants.

Georgia. The sort usually used largely in the south.........\$.10 \$1.00

CORN—(Zucker Mais)

Plant in rows and thin out inferior stalks, leaving a strong stalk each foot or fifteen inches. Rows may be thirty inches apart for early dwarf and forty-eight inches for late tall sorts. Plant a half inch deep at first and deeper as the ground warms up, but three inches is the limit. The suckers should be twisted off when they get six or eight inches high and the stalks hilled up when a foot high. Shallow cultivating is important because the corn roots are near the surface. Two plantings may be made but If more are wanted, it is safer to plant later sorts early. May 10th is, on an average, the earliest safe date to plant corn, but a few plants can be started in small pots earlier and planted out after danger from frost has passed.

One pound will plant 100 feet of row or 100 hills.	Pkt.	½ lb.	Lb.	5 lbs.	10 lbs.

HERBS-Sweet, Pot and Medical

A small space in the garden may be used to good advantage for the cultivation of a few of the most useful and desirable herbs. Their cultivation is very simple, but little care being needed beyond keeping down the weeds. Sow in April or May in drills twelve to fifteen inches apart, and thin out the young plants where they stand too thick.

	Identical, except in color				

LETTUCE—(Lattich Salat)

While lettuce may be had at the grocer's the year around, the garden still produces better than can be bought and its care and culture are so simple that the children can run that part of the garden. The worst pest is the Root Aphis and this is easily controlled with a sowing of Tobacco Dust in the furrow under the seed. An occasional watering with Nitrate of Soda will greatly aid lettuce to large size. Loose leaf sorts may be gathered when large enough—heading kinds should be transplanted or thinned to six inches apart and the less these are watered the better, to prevent rotting in the heart. Certain kinds are intended for inside; outdoors these are apt to be tough and bitter.

Sow a half inch deep in rows eighteen inches apart, every few weeks in the summer if a continuous supply is wanted. The seeds of both kinds listed are largely used in pickles and the white is the mustard of commerce. Pkt. Oz. ¼ lb. Lb. \$.30 \$.75 \$.15 White English. The kind commonly used for sowing...........\$.05 .75 .15 .30 MUSHROOM—(Erdschwamm) The chief essential in raising Mushrooms indoors is a controlled temperature. The ideal temperature is 65 deg. Fahr. but it should not vary more than 5 degrees to attain the greatest success. A pamphlet dealing at length with the growing of Mushrooms will be furnished with an order for Spawn, or for 5c in stamps or coin.

Pure Culture Spawn. Direct Bricks. Best brick spawn on the market, per brick 40c, 3 for \$1.00, 10 bricks \$3.25. For larger quantities please write for price.

Lambert Pure Culture Spawn. In quart milk bottles. In this form the spawn is of the highest potency. Per quart, \$1.50, 2 quarts \$2.50, carton of a dozen quarts for \$12.00. ONION—(Zwiebel) To grow large onions from seed, it is necessary to have light, very rich soil, seed adapted to this climate and patience to keep the weeds out. Sow thinly, one-fourth inch deep in rows a suitable distance apart. Grown from setts, onions need quite as much care but more are used for bunching before they form bulbs and soil need not be so extremely rich; they get large very much sooner also but will not keep as long in storage. In the fall we have the hardy Egyptian Onion setts; in the spring the yellow and white bottom setts. Price on request.

One ounce of seeds for 100 feet. One pound of setts for 50 feet. Pkt. 1/4 lb. Oz. Lb. \$.20 \$2.00 Large Red Wethersfield. Large, flat, late variety...........\$.05 .60 Southport Red Globe. Medium, round..... .60 2.00 White Silverskin. Somewhat flat, medium size, mild flavor and largely used for pickling.

Southport White Globe. Deeper through but much like the preceding and much used for pickles. 2.50 .25 .25 .75 2.50 PRIZETAKER. Nearly globe-shaped; yellowish brown skin; mild flavor. This sort may be sown early in hot-beds and transplanted when warm enough and by fall will make a

For onion seed in large quantities, write for special price.

OKRA, or GUMBO—(Essbarer Hibiscus)

The young seed pods are cut up, and used for soups and stews. Sow thinly in rows in June and thin to two feet apart each way.

Tall Green Con at a tall to the	Pkt.	Oz.	¼ lb.	Lb.
Tall Green. Grows two to three feet high	& 0E	¢ 15	\$.30	\$1.00
White Velvet. Dwarfer and pods light green. Best sort	05	.15	.30	

PARSLEY—(Petersilie)

The chief difficulty with parsley is to get the seed up, which is because it takes five or six weeks to germinate. Sow the seed thinly, about one-fourth inch deep, early in April and cover with a thin board and you will have no trouble. Thin the plants to three inches apart. A few small plants in a pot will grow nicely in the house during the winter.

District and Maria	Pkt.	Oz.	¼ 1b.	Lb.
Plain Leaved. Much used in soups, etc	.05	\$.15	\$.40	\$1.00
Extra Double Curied. A choice variety, well curled	05	15	40	1.25
Hamburg, Large Rooted. The roots are used in winter	.05	.15	.40	1 25

PARSNIP—(Pastinak)

Being a plant that requires all season to mature, it is essential to sow early in May and get the seed up the first time. A beating rain may harden the ground and prevent the delicate sprouts from coming through, therefore sow a little early radish in the row along with the parsnip, which will break the crust for the latter. Sow a half inch deep and thin to two or three inches apart. Never try to raise parsnips on freshly manured land as they will grow forked roots of little use.

Use one ounce of fresh seed to 200 feet.

GUERNSEY HALF LONG. The best sort to use in this region.\$.05 \$.15 \$.30 \$1.00

PEAS—(Erbsen)

If you have the room, few vegetables taste so good as home grown peas. They should be sown early, the earliest in March, an inch deep at first and as the ground warms up, deeper but not over three inches. Later sowings, say July, are apt to be disappointing, so it is better to sow early, medium and late sorts at the same time, the later sorts making larger pods and seeds. It pays to inoculate the seed with Legume Bacteria, same as beans. If the pods are not well filled, the soil lacks phosphorus, and if the vines do not grow well the soil should be limed before the next season.

A pound will sow 50 feet of row.

KENDELIG BIRCH OF INC.	Pkt.	½ lb.	Lb.	5 lbs.
KENDEL'S FIRST OF ALL. For many years the best smooth,

Scarlet China Winter. A half long sort, thicker at the bottom	.05	.15	.40	1.00

RHUBARB—(Rahbarber)

Rhubarb requires an abundance of rich soil and water to make a good crop. Use a liberal dose of Sheep Manure with a small amount of Nitrate of Soda dug in around the roots very early in the spring. A barrel with both ends out set over a plant will make longer stems and earlier. It takes four years for seed to produce a crop, but roots, which are ready in April, produce the second year.

¹/₄ 1b. \$.75 Pkt. Oz. Lb. \$2.50 Victoria. The principal variety in this market.................\$.05

SALSIFY—(Haferwurzel)

Commonly called Oyster Plant because it tastes so much like oysters. A winter vegetable but little appreciated by most people, but greatly liked by those who know it. Early Radish seed sown with salsify will assure a good stand as it is important to get it up well the first time so the roots will be large enough. Like parsnips, they may be left in the ground in winter and dug as wanted. If frozen when dug, will thaw out, without injury in icy cold water.

Use one ounce to 50 feet of row.

· Pkt. Oz. 1/4 lb. Lb. Mammoth Sandwich Island. For many years the only sort \$.25 \$.75 \$2.50 used

SORREL—(Sauerampfer)—See under Herbs

SPINACH—(Spinat)

The ordinary spinach may be sown almost any time that anything can, spring, summer or fall and is ready for use three or four months after sowing. Thin to three inches apart. The New Zealand Summer is planted early, two seeds in a group, the groups two feet apart. Being a runner, the ends are picked to be followed by more as the plant grows. A watering with Nitrate of Soda, increases the yield. Use one ounce to 100 feet of row.

being used. Profitable in the smallest garden, three or four plants producing a peck each week	•	.15	.30	1.00

SQUASH—(Speise Kuerbis)

The chief trouble encountered with squashes is caused by the bugs and borers. A dusting of Slug Shot after each rain will cheek the bugs but the borers in the stem, which attack the running sorts can be circumvented only by causing the vincs to root at three or four of the joints by covering with soil, so that, when the borer gets into the main stem and would kill the vine, the roots at the joints would be sufficient to sustain it and no damage would result. This simple precaution has saved many acres of squash. Plant six or eight seeds in a hill, the early three or four and the late sorts twice as far apart, after middle of May and the ground is warm.

General List of Flower Seeds

Our wide acquaintance with the trade, both in this country and abroad, places us in constant touch with the leading experts and specialists in seed growing from whom we buy direct. This not only reduces chances for error but fixes responsibility, assuring us of the choicest seeds and the latest introductions. We strive to make our list as complete as possible but of only such kinds as we know are suitable for this locality. Our friends may therefore feel sure of success with their selections under reasonable weather conditions. In ordering, the numbers are sufficient.

ACHILLEA. (Milfoil or Yarrow.)

NO.

1 Ptarmica "The Pearl." One of the best hardy white perennials. From spring till frost it is covered with heads of purest white double flowers. Easily grown from seed, flowering the first scason if sown early. 2 ft....... PKT. .10 ACONITUM. (Eisenhut.) (Monk's Hood.)
Hardy perennials with panicles of blue helmctshaped flowers in the fall.

bouquets. Annuals	s. Bright	Pink and	
NO.			PKT.
3 Single Mixed			
4 Double Mixed			

AGERATUM. (Leberbalsam.)
(Floss Flower.)
One of the very best bedding plants, being literally a sheet of bloom from early summer till frost. The various blue varieties are without doubt the most satisfactory bedding plants of this color for our trying climate. Easily raised from seed, which is usually started in a hotbed or window and transferred to the open ground in May. Can also be sown outdoors in May. Especially fine for pots or window boxes.

10 Coronaria Mixed. Including white...... .10

AMARANTHUS. (Amarant.)

Highly ornamental foliage plants, producing a striking effect in the flower garden. Sow the seeds early, and set out last of May, or in June, in rich soil. Annual.

13 Tricolor (Joseph's Coat). Red, yellow and green foliage, very attractive; 2 ft....10

ANCHUSA. (Alkanet.)
Italica, Dropmore Variety. One of the best hardy percanials. Is becoming more popular each season, bearing flowers of the richest gentian-blue. Blooms freely all summer. 5 ft......

ANTIRRHINUM. (Snapdragon.)

ANTIRRHINUM. (Snapdragon.)
(Loewenmaul.)
Within the last few years Snapdragons have become immensely popular. This is not to be wondered at, as, whether used for cutting or for show in the garden, they are one of the most valuable flowers which can readily be grown from seed. Sown out of doors the first week of May, the plants bloom early in July, remaining in full flower until November. For earlier

ANTIRRHINUM (Snapdragon)

flowering, start indoors or in a frame in March, transplanting to the open when the weather is

suitable.

If troubled with rust, dust the plants with pow-

dered sulphur.

TALL MAXIMUM

The following list comprises the principal eolors of the newest creation in Giant Snapdragons being a marked advance in size and brilliancy of color as well as compactness of flowers on the stem.

AQUITECIA (Columbine.) (Akelev.)	

AQUILEGIA. (Columbine.)

Plants ready carly in May.

No hardy plant grown from seed is more easily handled than the Columbine. Seed may be planted in the open ground early in spring, and will bloom the same season; or they may be planted in August or September, and will come up early in spring to make vigorous plants, which will bloom abundantly during late spring and early summer. summer.

Columbines should be planted wherever their presence will serve to lighten up a too stiff and formal planting; for no other plant is more generous of its blooms, or is more effectively adapted

-ero	us of its blooms, or is more enectively adap	tea

ASTERS

(Schoenkranz, Aster.)

(Schoenkranz, Aster.)

This flower is not only one of the most popular, but also one of the most effective of our garden favorites, producing flowers of great richness and variety of color, in the most perfect and beautiful form during the late summer and early fall. They bear a striking resemblance to Chrysanthemums and are fully as useful for eut flowers.

If Asters are grown in the same spot a few times, they are apt to be attacked by a disease that turns them yellow before they flower. They should be grown in a different bed each year and if the seed is treated first with Semesan, this trouble will be reduced. Sometimes ants carry Aphides to the roots and cause the plants to turn yellow and die. More large flowers will be produced if the center bud on the main stalk is pinched out as soon as noticed.

The recent development of Asters in California has placed them in a class with the finest and most satisfactory flowers we can have in our gardens.

37 Lakewood Prize Mixture. Our customers often find that the various types of Asters are so beautiful that it is difficult to choose between them. By mixing the tall growing varieties of every color in all the types we list below such as Beauty, Improved Giants, Branching, Royal, Ostrich Feather, etc., we have a mixture that will enable everyone to have a few plants of all the choicest kinds in a complete assortment of color. We cannot recommend it too highly. Trade pkt.

30c; ½ oz. 50c; pkt.....

Vick's Branching. From the time of its introduction this aster has been popular with both florists and amateurs on account of robust growth, long strong stems and abundance of flowers which are very

Painted Daisy

CHRYSANTHEMUM. (Wucherblume Goldblume.)

Showy and effective garden favorites. The annual varieties are in great demand, and extensively grown for cut flowers, making a fine pot plant for winter, and excellent for beds or borders through the summer. Succeed best in loam and rotted manure, equal parts.

Seeds may be sown in hotbeds during March or outdoors during May. Pinching back in early growth makes bushy and shapely plants. Average height 1½ ft.

Plants ready end of April.

COSMOS.

COSMOS.

Beautiful autumn-blooming plants. They produce thousands of beautiful flowers in pure white, pink and crimson shades, furnishing an abundance of cut flowers for autumn decorations when other flowers are scarce. Should be sown in spring in the open ground, when danger of frost is past, or the seed may be started under cover and afterwards transplanted. Plant not less than 18 inches apart in rows or in masses in beds. When the plants are about a foot high the tops should be pinched out to induce a bushy growth. They prefer a rather light, not too rich soil, but do well almost anywhere.

Plants early in May. Hyacinth Bean. See Dolichos.

Fumariaefolia

ICE-PLANT. (Eispflanze.)
A pretty little trailing plant; the leaves and stalks being covered with small, watery globules, giving it the appearance of being covered with ice. A valuable plant for dry, sunny locations on banks, rockwork, borders and hanging-baskets. Annual

Ipomoea. See Morning Glory.

JAPANESE HOP VINE. (Humulus Japonicus.) (Hopfen.)
A very rapid growing vine, with fine foliage, which is very dense and quite free from insect enemies, and which endures the heat remarkably Grows 25 ft. high and self sows if the ground is not disturbed. Annual.

Green Leaved. Large, dark foliage; 1/8 oz. 15c Variegated. Like the preceding except with variegated foliage. Makes a hand-some vine; ½ oz. 20c .10

Joseph's Coat. See Amaranthus. Kenilworth Ivy. See Linaria.

KOCHIA. (Summer Cypress.) (Burning Bush.)
An annual ornamental plant that closely resembles a small cypress tree. It grows as much as 3 ft. high and in the fall changes from green to a flaming red. It makes an exceedingly attractive plant for a temporary hedge or a border for a bed of tall growing plants. The plant will bear

trimming like hedge plants and is easily grown from seed and readily transplanted.

NO. PKT. Trichophylla. True Summer Cypress; ½ oz. 15c.... KUDZU VINE. (Jack-and-the-Beanstalk.) A rapid growing vine of great merit. Leaves light green and heart-shaped. Attains a growth of 25 ft. the first season if started in a hothouse early. Perennial

Roots ready in April.

LARKSPUR. (Delphinium.) (Rittersporn.) Annual Sorts.

For perennial varieties, see Delphinium.

This is one of our best garden flowers. Seeds sown in the open ground before the close of April will produce flowering plants by the beginning of July, and give a continuous succession of flowers from then until frost. They make handsome beds and their free, graceful habit and bright colors are very effective when interspersed in the old-fashioned flower or shrubbery border. Good, rich soil dug deep and a sunny location suit them best.

Double Branching or Stock-Flowered. The fin-

Marguerite. See Carnation. Matricaria. See Feverfew. Martynia. See under Herbs.

MALLOW MARVELS.

There is no more striking sight than a plant of this grand percanial in full flower in August and September. The individual flowers are of enormous size, many measuring 9 in. or more across. In texture they resemble the finest satin. Their coloring is gorgeous, embracing all the beautiful variations from white to deep red. Our seed has been grown from plants selected for size and brilliancy of bloom. Everyone should have a few plants of these. They adapt themselves readily to all locations and conditions of soil. Very popular.

Roots ready in May.

MAURANDIA.
Half hardy climber that blooms the first season com seed. Used for trellises, hanging baskets

MARIGOLD. (Tagetes.) (Sammetblume.)
In the autumn these old garden favorites are in their prime with a wealth of bright colors. Easy of culture and suited to bedding in light soil in full exposure to the sun. The rich yellows in combination with the blue Larkspurs and Cornflowers are your striking. flowers are very striking.

Double African Sorts. These are uniformly large and self-colored in

French Marigold

French Sorts.

These are smaller in size of flower but none the less handsome and striking. Includes both striped and single kinds. Fine for edgings.

	with rich green foliage; the giant trusses	
	of flowers being borne on erect, strong,	
	stiff stalks and surpassing all others	
	in brilliancy of color; especially suited	
	for house culture. ¼ oz. 50c	.10
291	Pyramidal Salmon Queen. ¼ oz. 40c	.10

MIMOSA. (Sensitive Plant.) (Sinnpflanze.)

A very interesting and curious plant, its leaves closing if touched or shaken. Good garden loam. Annual.

MIMULUS.

Moschatus. (Musk Plant.) A small trailing plant with yellow flowers and fragrant foliage; used in hanging baskets or pots and to cover the soil in pots 2921 Moschatus. .15 containing large plants... Mirabilis. See Four O'Clocks. Momordica. See Balsam Pear.

MONARDA. (Bergamot.)

A perennial aromatic herb, growing two feet high and bearing tufted heads of red or deep rose colored flowers. An old-fashioned favorite.

293 Didyma. (Cambridge Scarlet.) Lustrous dark scarlet Monk's-hood. See Aconitum.

MORNING GLORY. (Trichterwinde.) (Convolvulus Ipomoca.)

Extensive genus of twining plants; remarkable for their fine foliage and showy flowers. Well adapted for open air or greenhouse culture. An-Finest Mixed. Imported from France; includes every color. Oz. 35c, ½ lb. \$1.00 Imperial Japanese. Giant flowers in many shades and color combinations and will not scatter seed. Soak the seed 24 hours before sowing or some may take all summer to sprout. Oz. 40c, ½ lb. \$1.25 NO. 294 Heavenly Blue. A giant flower of the Japanese type grown separately on account of its great beauty..... .10 .15

MOON FLOWER.

At night and during dull days the plants are covered with an abundance of large, pure white, fragrant flowers, 5 to 6 in. in diameter. It grows very rapidly and will cover a large surface. The most rapid grower of any annual in a sunny lo-

eation.
297 White. (Ipomaea Grandiflora.) 1/4 oz.
40c

Plants ready end of May. Mourning Bride. See Scabiosa. Musk Plant. See Mimulus. Myosotis. Scc Forget-Me-Not.

NASTURTIUMS.

For picking for the house, few flowers can compare with these easily grown annuals. Time was when no garden was without a few, either tall or dwarf, but the appearance of black aphis makes it necessary to have a sprayer and some Nicotine handy. The soil seems to get "sick" when they are grown too often in the same spot

and the results are disappointing. The more nasturtiums are picked the more flowers will come, altho if a few seeds are wanted to pickle and allowed to ripen, no particular harm would be done. The tall kinds are suitable for training up on posts or fences, the dwarf for a border.

Superb Hybrid Tall Mixed. A blending of all the various shades. Oz. 25c, ¼ lb. 75c

Dwarf Mixed. Separate named varieties mixed in proper proportions. Oz. 25c, ¼ lb. 75c .10

NEMOPHILA. (Lovegrovc.) (Triften oder Hainblume.)

Neat and compact, with varied and beautiful colors, blooming all summer. Suitable for beds, borders and pot culture. Grow best in a moist, partially-shaded situation and not very rich soil.

OENOTHERA. (Evening Primrose.) (Nachtkerze.)
Beautiful, free-flowering plants, very useful for beds and borders, flowering in long spikes. Common garden loam. Biennial.
303 Biennis. Beautiful clear canary-yellow. .10

PANSY

(Heartsease, Viola Tricolor.) (Stiefmuetterchen.)

We endeavor to get absolutely the best strains of Pansies grown in France, England and Germany. A perusal of the list will show the choicest varieties, regardless of cost and if proper care is exercised in sowing, the germination will be found to be high. Seed sown in hotbeds or cold frames in February or March will flower better during the fall and winter, while that sown in August or September and wintered over will give better results in spring and summer. On account of the delicate nature of the fancy varieties, extreme care should be used to start the seeds, light, rich soil, made fine with a rake or sieve being important and a covering of newspaper or cheese-cloth until the seeds, which should be only slightly covered with soil, are up, is absolutely necessary to insure a good stand.

If more plants come up than are needed, when they have their fourth or fifth leaf transplant them

If more plants come up than are needed, when they have their fourth or fifth leaf transplant them 3 in. apart each way, taking them as they come, rather than picking out the strongest, as the delicate plants are apt to produce the finest flowers. Protection from the midday sun is necessary to have large

flowers, and keeping them picked will extend the flowering period. A mulching of Sheep Manure twice a month and a dusting of Tobacco Dust as often, will make them grow and keep the insects away.

The Giant flowering only are listed.

DOUBLE PETUNIA.

It is, perhaps, not generally understood by the buying public that seed of the double sorts are only obtained by artificially fecundating single blooms with the pollen from the double. This makes the seed necessarily high priced. In spite of all possible care only a small percentage will produce double flowers, but the singles are of an unusually fine quality. The finest doubles are always grown from seed; when propagated from cuttings they degenerate.

The weaker seedlings should be carefully saved, as these invariably produce the finest double blooms. The same is true of the single sorts, the large strong scedlings usually being weedy, while the, at first, least promising ones produce the very finest flowers of the best colorings.

It is always best to sow Petunias indoors and transplant to the open in May.

PKT.

Double Mixed Fringed. Extra fringed, blotched and striped, fecundated with double of the best strain. ½ pkt. 25c... .50

Plants ready in May.

PHLOX DRUMMONDH GRANDIFLORA.
(Flammenblume.)

The Phloxes are the showiest and most easily raised of all Annuals. We know of nothing which produces such a continuous supply of the most attractive flowers in a most wonderful range of colors. All the tints of the rainbow are represented with all possible variations of stripes, reins and eyes of contrasting shades. Seed should be sown in the ground as soon as danger of frost is over and in a few weeks the beds are a blaze of glory. May be grown in beds or borders, boxes or vases and make splendid cutting material as the blooms last long in water. 1 ft.

A very fine collection of choicest varieties of plants ready in April.

Platycodon. See Campanula. Polyanthus. See Primula.

PHYSALIS. (Chinese Lantern Plant.)

A hardy perennial that has become very popular for the orange colored seed capsules that dry and retain their bright color all through the winter. It is wise to set out the roots where they can be kept within bounds or they will take possession and become a nuisance. The "lanterns" will be increased in number and size if the plants are fed a little Nitrate of Potash two or three times the fore part of the summer. Watch out for potato bugs.

347 Francheti

Roots ready in April.

POPPY. (Papaver.) (Mohn.)
Annual Poppies should be sown as early in the spring as possible where they arc to remain, as they do not stand transplanting. Sow very thinly, preferably in cloudy weather or after a shower, barely cover the seed, press down firmly, and they will come up in a few days. If they come up too thickly they must be thinned out to stand 3 or 4 in. or more apart if you wish best results. It is well to make several sowings at in-

Carnation Poppies

tervals to keep up a succession of bloom. If picked just before expanding the flowers will last several days. It is also advisable to pick the old flowers as soon as fallen, which will lengthen the blooming season quite a while. PKT. NO. 348 .10

HARDY PERENNIAL POPPIES.

Oriental Poppies should be sown in early spring in the open ground as soon as it is fit to work. The plants disappear during July or August, appearing again as soon as the weather gets cool. It is well to mark the places they are planted with a stake to insure the roots against disturbance during their annual resting period. A very large orange-sear

394	let flower, averaging 5 in. in diameter;

from seed, blooming almost as quickly as the annual sorts. They are of graceful, neat habit, with bright green, fernlike foliage, 12 in. high, bearing their brilliant white, yellow and orange flowers in endless profusion; most useful for cutting

Plants ready in May. California Poppy. See Eschseholtzia.

PORTULACA. (Portulak.) (Irish Moss.)
Too much cannot be said in praise of this popular and handsome aunual which produces a perfect carpet iu a remarkably short time. Succeeds best in an exposed, sunny location and flourishes in dry and very shallow soil. It is of a creeping nature with moss-like foliage, which from early summer until frost is hidden by the brilliant rose-like flowers that open wide in the morning and close in the evening. Because of its foliage it is frequently known as Irish Moss or Moss Rose. It is well to mix the seed with three or four times its bulk of dry sand or soil which permits an even and easy distribution of the seed. It may safely be sown the latter part of April. safely be sown the latter part of April.

Miniature Sunflower

SUNFLOWER. (Helianthus.)
(Sonnenblume.)

The larger varieties are useful in forming backgrounds of large beds or borders and for distant effects, while the smaller sorts may be planted with scarlet salvia, cannas and other tall bedding plants, also furnishing good cutting material. Hardy annuals.

422 Globe Flowered. Double globe or dahlialike flowers of a rich saffron yellow. 7 ft.

.10 .10 .10 Miniature. (H. Cucumerlfolius.) Identical in appearance with our common yellow Field Daisy. The dainty golden-

Modern eulture of Sweet Peas has produced so many beautiful colors and such large flowers that they are almost indispensable. That these fine new varieties are harder to grow, goes without saying, for with many people success seems to be the exception the exception.

We made a canvass among our customers and have come to the conclusion that poor soil eauses most of the failures and the unfavorable place they were sown and the wrong method of eultivation eaused the rest.

Sweet Peas need rich soil—the richer the better—and it should be rich to a depth of at least one foot. Raw Bone Meal, a pound to three feet of row, is the best fertilizer, especially in heavy soil. Sheep manure comes next, and old eow manure and rotted horse manure follow, but fresh horse manure should never be used and in no case should any fertilizer come into direct contact with the seed, especially if the fertilizer is fresh.

In elay soil, three or four inehes is a sufficient depth to sow the seed and in light soils six or eight inehes will be better. Some people advise sowing the seed in a trench and filling in the soil as the plants grow, but this sometimes smothers the plants. Others advise covering the seeds to the proper depth at once and treading the soil down firmly. The latter method will take the seed longer to grow, so that early sowing is necessary if early flowers are wanted. By this method successive sowings may be made so that flowers may be had until frost.

Better results are obtained by having the vines away from walls and tight fences, as the plants seem to require air.

If the soil is frequently stirred and watered too often, rank vines are obtained, but at the expense of flowers. It is therefore better to only pull the weeds and stir the soil but little. If the vines are allowed to go to seed they soon eease blooming.

A mulch of lawn trimmings or similar material laid about the plants keeps the soil moist and eool and also cheeks the growth of weeds.

If the seed is treated with Sweet Pea Bacteria there will be an increase in size of flower and a more extended blooming season.

Our grower in California has recommended the following list as being the best of the 150 kinds he grows.

NO. PKT.

457 Mary Pickford. Dainty eream pink, suffused salmon.

Mermaid. Rich true lavender.

Miss California. Orange salmon, cream pink. 459

460 Powerscourt. Fine lavender.

Royal Purple. Rieh purple. Royal Salute. Scarlet cerise. 461

462

Snowball. Dazzling white. 463

Tangerine. Orange.

Warrior. Giant maroon. 465

466 What Joy. Cream.

467 Youth. Large white, pink picotee.

468 Superb Mixed Giant Flowering Spencers. To the best mixture we are able to buy, we add some of each of the above list. Per pkt. 10c per ounce 25c, ¼ lb. 75c, pound \$2.50.

DWARF SWEET PEAS.

Cupids Mixed. These grow six inches high and make compact bushes, suitable for a border. Pkt. 10c, oz. 15c, ¼ lb. 40c.

Hardy Sweet Peas. See Lathyrus.

Τ.

SWEET ROCKET. (Nachtviola.)

(Hesperls Matronalis.)
Showy hardy perennials growing two or more feet high and bearing spikes of fragrant flowers that will continue in bloom for several weeks if not permitted to go to seed.

NO.		PKT.
470	Purple. (Dame's Violet.)	10
471	Pure White	10
472	Fine Mixed	10

SWEET SULTANS. (Centaurea Moschata.)
Undoubtedly the finest of all Centaureas for cut
flower purposes. The beautiful sweet-scented,
artistic-shaped flowers are borne on long, strong
stems, and when cut will stand for several days
in good condition. It is best, in this latitude, to
sow very early in the spring, so that they may
perfect their flowers before very hot weather
comes.

CO	mes.	
473	Americana (Basket Flower). A splendid native variety, 3 ft. high, bearing immense thistle-like blooms of a rosylavender color. Very showy in the mixed border and splendid for cutting. ¼ oz.	
474	45c 4 Suaveolens (Grecian Cornflower). Very	.10
	showy, large, bright yellow flowers; sweetly scented and a popular sort for cutting, lasting well	.10
478	5 Imperial Mixed. Colors white and shades of pink, lilac and purple; flowers large	
	and numerous. 1/4 oz. 45c.,	.10

SWEET WILLIAM. (Dianthus Barbatus.) (Bartnelke.)

(Bartnelke.)

Attractive, free-flowering hardy perennials usually classed as Dianthus with China Pinks, but are different from them in not blooming until the second year. In beds and borders they will produce a splendid effect in their rich, velvety flowers of many colors. They are of easy culture and profuse bloomers, appearing so early in the season that they fully repay for time and effort spent upon them. It is much better to raise new, vigorous young plants from seed every season than to divide the old plants.

спап	to divide the old plants.	
476	Pink Beauty. Striking salmon-pink	.10
477	Scarlet Beauty. Bright scarlet	.10
478	Dark Crimson. Rich dark shade	.10

	Plants ready in May.	
481	Double Mixed. A choice blend 14 oz	

THUNBERGIA. (Thumbergie.)
(Black-eyed Susan.)
Beautiful, rapid-growing annual climbers, preferring a warm, sunny situation; used extensively in hanging-baskets and vases. Very pretty flowers in buff, white, orange, etc., with dark eyes; mixed colors; 4 ft.

482 Finest Mixed

TORENIA.

Beautiful, free-flowering plants; suitable for pot-culture in house or conservatory. They also succeed well in a moist, shady border, during the summer months, and, for baskets and vases, are unsurpassed. Light, rich loam. Tender perennial

483 Fournieri. Azure blue, with three dark blue spots and bright yellow throat.... .10

VALERIANA. (Valerian.)
(Hardy Garden Heliotrope.)
Showy border plants with large heads of sweetly fragrant flowers of pinkish-white during June and July.
485 Officinalis. Strong heliotrope odor. 3

VERBENA. (Eisenkraut.)

This well-known and popular annual of a low procumbent habit is very desirable for massing in beds, for borders, window boxes and hanging baskets. Large clusters of brilliant flowers are borne in profusion from the early summer until frost. The shades run from snow-white to deep purple, including eyed-sorts and striped varieties. They lend themselves readily for bouquets. Sown in the open in May, the seed will produce flowering plants by August, but the season may well be prolonged by starting indoors and transplanting after danger of frost is over. Soak the seed before planting. A light turfy loam is best. The mam-

-plan	ting. A light turfy loam is best. The ma	ım-
moth	n-flowering strain we offer has trusses and	in-
divid	lual flowers of the largest size.

Plants ready in May.

VERONICA. (Speedwell.)
Hardy percunial with spikes of flowers in various colors, mostly shades of blue, in varying

VINCA. (Sinngruen.) (Madagascar Periwinkle or Old Maid.)

Beautiful free-flowering plants, with handsome blossoms. Seed should be sown early inside and transplanted into the border in May or June, where they will give finc blooms through the summer and autumn. Light, rich soil.

495 **Pure White.** .10 496 **Rose Pink...** .10 497 **Mixed Varieties.** Four sorts. ½ oz. 35c .10

Bedding Plants ready in May.

VIOLET. (Viola Odorata.)

Well-known hardy plants with single deep blue flowers of delightful fragrance. Used extensively for winter in the greenhouse. Good also in the rock garden. 498 Odorata Perpetual. Sweet scented, deep

blue

Violas. See under Pansies.

WALLFLOWER. (Cheiranthuscheiri.) (Gelbveil oder Goldlack.)

These fragrant flowers should be better known. Their adaptability for outdoor growth and for pot-culture should win favor here as in Europe, where they are very popular. The oriental coloring of the blooms in their rich reds and yellows is very effective. Succeed best in light, rich soil in a moist atmosphere. Sow the seed early in a hot-bed and transplant. On the approach of cold weather pot and grow in the house to flower all winter. Tender perennial. 2 ft.

PKT. NO.

XERANTHEMUM. (Everlasting.)

Handsome double everlasting flowers easily dried and used for winter bouquets. Annual.

501 Annuum Mixed. White, pink and pur-

ZINNIA

With seed supplies cut off from the usual sources during the late war, the world turned to California to fill the gap. The result brought us, among other things, the modern Zinnia. Not only have they been greatly increased in size of flower but also in color range until we now have more than a dozen. Not only that, but new forms have been developed so that the Zinnia now ranks as one of the two or three most popular and widely sown flowers grown. That all these improvements have been made without sacrificing vigor and sturdiness of the plants is gratifying because there is hardly another plant that will flower so well under adverse conditions. The separate colors enable our friends to work out almost any color scheme in the garden, an art in garden-making that adds greatly to the pleasure of the effort.

Richard Wallace. Pure unfading Canary in color. 5 feet	.25	2.50
Gladiator. Large yellow flowers, thinly speckled dull red	.25	2.50

DAHLIAS

Chief among the newer of these is the Cactus type with long and twisted petals, which is a radical departure from the old-fashioned "Show" Dahlia with each petal set in its place. Then there are Decorative and Fancy Dahlias with reflex petals. Pompon Dahlias, which have small ball-shaped flowers, Single Dahlias in many beautiful colors and the tall-growing, loose-petaled type with its big fluffy blooms. We submit below a list of the very finest Dahlias that are now cultivated. These are so widely different from the common garden Dahlias of a few years ago that they will scarcely be recognized as belonging to the same group of flowers.

CACTUS DAHLIAS

Characterized by long, narrow, pointed, tubular and twisted petals.	Each
Ambassador. Soft yellow at the center with salmon, amber and pink shading. Betty Austin. Yellow at base, blending to rosy carmine. California Beauty. Pure copper, a gem in the garden a good cut flower. Cigarette Giant. Flowers on strong stems, cream ground edge with home granite red. Countess of Lonsdale. A blend of salmon, pink and amber. Ephraim Gill. Giant flowers on strong stems; amber suffused orange scarlet. Fort Mommouth. Handsome maroon color, shaded bluish violet. George Walters. A very large soft coral pink bloom suffused with gold. Gladys Sherwood. Pure white immense size. Golden Gate. Pure gold petals twisted and curled free bloomer. Judge Preston. Pretty bronze borne freely on good stem. Papillon. Blending of oldrose with golden lights. Pink Pearl. Lilac pink with lighter tips. Robert E. Lee. Brilliant cardinal red, does not peel or burn in the sun. Rollo Boy. Large yellow stems long and strong. Roman Eagle. Color a brilliant, flaming burnished copper. Thais. White suffused with soft mauve, good stem.	\$.50 .25 .50 .35 .20 .50 .75 .25 .35 .20 .50 .50 .50 .20 1.00

POMPON DAHLIAS

We will have ten choice sorts of this type in all the colors, white, scarlet, pink, maroon, apricot, lemon, buff and bronze at a uniform price of 15c each. List of names furnished on request.

GLADIOLI

Gladioli should be planted at intervals of ten days from the time the ground can be worked (about April 15th) until July 15th. If this is done the gardener can be assured of a continuous mass of bloom from July until frost.

The following varieties were selected to give a wide range of the choicest coloring, form and size. Every sort listed here was chosen for its individuality.

	Each	Doz.	Per 100
Aflame (Prim). Rose shading to bright orange	\$.10	\$1.00	\$7.50
Aida. Dark blue lilac blotches in throat	.08	1.00	7.50
Albatross. One of the best and largest white	.25	2.50	20.00

Scarlet Wonder. Purest deep scarlet mammoth flowers	.08	.70	5.00
Gold Medal Mixture	.05	.45	3.50

LILIES

Lilies thrive best in a rich, moist soil. Most varieties should be planted at least six inches deep and an inch or two deeper if of the Speciosum variety. When planted the bulbs should rest upon an inch of sand and about the same quantity should surround the bulbs on all sides. A light covering of leaves or litter should be spread when the ground freezes.

And the COLLEGE AND THE SECOND	Each	Doz.
Auratum (Gold Banded). Undoubtedly one of the finest. Its large, graceful,		
tragrant flowers are composed of six petals of a delicate ivory-white color		
thickly studged with chocolate-crimson spots, and striped through the center		
a golden-yellow; 3 to 5 feet. July, September	\$ 40	\$4.00
Batemanni (Turks Cap). Color reddish orange.	.50	5.00
Henryi (Yellow Speciosum). Deep apricot-yellow, lightly spotted brown		
Regale (Myriophyllum). The large trumpet-shaped, delicately scented flowers,	.50	5.00
are ivery-white shaded pint tinged with comments of the first tinged with comments that		
are ivory-white, shaded pink, tinged with canary-yellow at the base of the		
petals	.30	3.0 0
Speciosum Album. Pure white with a green band traversing the center of each		
petal	.40	4.00
Speciosum Rubrum. With ruby spots distributed over a broad expanse of		
wnite	.40	4.00
Superbum. A beautiful, native variety, bright, reddish-orange spotted	.25	2.50
ligrinum Splendens. Bright orange-red, spotted with black	.25	2.50
ligrinum Flore Plena. Bright orange-scarlet, spotted black	.30	3.00
Umbellatum Grandiflorum. Coppery-orange, bell shaped flowers		
copper, crange, ben snaped nowers	.30	3.00

PAEONIES

The cultural requirements of the Paeony are few and simple: A sunny position; a deep, rich soil and a plentiful supply of water during the growing season.

We offer only whole roots as we do not handle "divisions" or "eyes". The planting of whole roots means the saving of two or three years in securing perfect blooms.

Varieties and prices on application.

SPIREA (Thunbergii). The white flowers appear in great numbers very early in the spring. 18/24 in	.30
SPIREA (Van Houttei). (Bridal Wreath). The pure white flowers appear in early summer. Very hardy. 2/3 ft. plants	.20
WEIGELA (Rosea). Great quantities of pink flowers, appear in May, June and July.	.35
2 to 3 ft. plants	
A19	

HARDY ROSES

Roses should be planted in rich, well prepared soil, preferably clay loam, fertilized with well rotted manure or bone meal. They should be given thorough, but shallow cultivation. The best results can be obtained when planted in the open sunlight. All Roses are benefitted by winter protection, by banking about the plant with earth or covering with a light mulch of leaves or peat moss. Roses should be trimmed in the spring before growth starts, shaping the plant and removing all canes that have become weakened by blooming. The health and vigor of the plant can be improved by removing the dead flowers during the summer.

To counteract any damage to the leaves by worms use Arsenate of Lead; for aphis, thrip, or red spider, use Nicotine; and for fungus use Bordeaux Mixture or Sulphur, for Brown Spot use Massey or Manganar Dust.

HYBRID TEA ROSES (Everblooming or Monthly Roses)

Betty Uprichard. Blend of carmine, with coppery orange

C. K. Douglas. Scarlet flushed with velvety crimson

Dame Edith Helen. A magnificent fragrant, full bodied new rose of many substantial petals which curl back prettily, holding steadily to one vivid pink color.

Edel. Large bloom of purest white with ivory base.

Etoile De France. Garnet red cup, center of vivid cerise

Gruss An Teplitz. Color scarlet, shading to velvety crimson, very fragrant.

Lady Alice Stanley. Coral rose suffused pink

Los Angeles. Flame-pink toned with coral and shaded with gold at the base of the petals. The blossoms are very fragrant and of lasting color.

Mme. Edouard Herriot. A glorious commingling of terra cotta bronze, geranium red and dull copper; fine, long, pointed buds of coral red and yellow.

Mme. Butterfly. Charming bright pink, shaded apricot and gold.

Mrs. A. Ward. Deep orange yellow shading to cream

Mrs. Henry Bowles. Clear pink shading to salmon pink

Mrs. W. C. Miller. Delicate pearl with salmon shading

Pink Pearl. Bright rose pink with salmon base, and red suffusion slightly accented at the margin.

Radiance. Rose with shades of opal and copper

Souv. De Claudus Pernet. Sunflower-yellow, very fine

William F. Dreer. Soft, silvery shell pink.

Etoile De Holland. Brilliant crimson red

Joanna Hill. Clear yellow with orange yellow heart

Mrs. Erk Penbroke Thom. Yellow center, clear lemon color

President Herbert Hoover. Cerise pink, flamed with yellow, orange and scarlet.

Rev. F. Page=Roberts. Golden yellow, stained outside with red.

Talisman. Gold, apricot, yellow, deep pink and old rose

Wilhelm Kordes. Exquisite golden yellow flushed with orange and copper red.

Any of above two-year field grown plants \$.50 each, set 12 for..... \$5.00

HARDY CLIMBING ROSES

The state of General Control of the state of	
American Beauty. Color a pleasing rose-pink; of splendid form, a strong, healthy vigor-	
ous grower.	\$.40
American Pillar. A single flowering variety of great beauty. The flowers are of large	
size, of a lovely shade of pink with clear white eyes and clusters of yellow stamens	.40
Doctor Van Fleet. Large flowers resembling Tea Roses of flesh-tinted white on very	
long stems	.40
Mary Wallace. A new Pillar Rose type. Flowers well-formed, semi-double, bright clear rose-pink and salmon. Flowers generally exceed 4 inches in diameter. Very	
hardy	.40
Paul's Scarlet Climber. A brilliant, vivid scarlet which is maintained from bud until	
the petals fall. Medium in size, in clusters of from three to six flowers each	.40
Mme. Gregoire Staechelin. Fragrant climber; dark bud, changing to carmine and	
finally to pearly pink	.65
Star of Persia. Flowers large bright vellow in clusters	ΕO

INSECTICIDES AND SPRAYING COMPOUNDS

Most injurious Insects are roughly divided into two groups, those that chew or consume the foliage or flowers, which may be reached with stomach poisons and those that suck the plant juices which require a substance that kills by contact. Several of these may be combined for an all around spray on a small scale operation, but might be wasteful and expensive otherwise. Be sure to learn into which class the pest belongs that you wish to combat to avoid disappointment with your efforts.

Fish Oil Soap. Prevents the ravages of mealy bug and various kinds of worms and insects that infest the bark of trees and shrubs. Per 1b. 40c.

Lime and Sulphur Wash is conceded to be the best remedy, all things considered, that there is against San Jose scale, Scurvy Bark Louse, Oyster Shell Scale, etc., while the lime has some value against some fungus diseases also.

For a winter spray use one gallon of Wash to eleven of water and in summer one to sixteen. Per quart 40c; gallon 85c; 5 gallons \$3.25; barrel of 45 to 50 gallons, 24c per gallon, f. o. b. Cleveland.

Nicotine. A liquid used for killing Aphis or Green Fly on roses, etc. May be sprayed or vaporized. 40 per cent strength, per lb. \$2.75; ½ lb. \$1.50; ¼ lb. 80c; small bottles 25c. Unmailable.

Nicotine-Pyrox. A combination of Bordeaux, Lead and Nicotine, forming a combination for protection against fungus, leaf-eating and sucking insects. 10 oz. 50c; 5 lbs. \$1.75

RED-SQUILL RAT POWDER. The government officials in the U. S. Agricultural Department are much concerned about the enormous annual loss caused by rats. A rat destroying agency that would be safe to use around the home and poultry yard and at the same time leave no annoying odors was long sought and finally found in this RAT POWDER. It is dusted on or mixed into any food the rats like and if there is enough to go around, it cleans them out. It is perfectly harmless to humans, house pets or even Baby Chicks. A package is enough for one pound of food. Price, 25c. Postage, 3c.

Hammond's Slug Shot. Recommended for most worms and caterpillars which infest cabbage plants, currants, gooseberries and the like. 1 lb. Sifter Carton, 25c; 5 lb. can \$1.00.

Scalecide. This is a miscible oil effective against scale on fruit and shade trees. It is used the same as the Lime and Sulphur Wash, opinions differing as to which is the best to use when considering the effects on the trees. Use 15 gallons of soft water to one of Scalecide. Price, Quart 60c; \$1.40 per gallon; 5 gallons for \$4.90; 50 gallon barrel \$26.50.

Sulphur—Flowers of. Very finely pulverized for arresting mildew. Pkt. ½ lb. 15c; lb. 25c. Tobacco Dust. Fertilizer and insecticide. An excellent fertilizer for lawns and gardens, and a good preventive against cut worms and leaf eating caterpillars. Dust onto the plants when they are wet, and for cut worms spread on the ground around the plants to be protected. If you have been troubled with wormy radishes or sickly lettuce, use a tablespoonful to the foot in the bottom of the furrow and sow the seeds right in the Tobacco Dust. It is a sure cure and will give you perfect radishes and lettuce. Per lb. 20c; 5 lbs. 90c; 10 lbs. \$1.75; 25 lbs. \$3.75.

Tree Tanglefoot. Similar to that used in making fly-paper. It is easily applied and is a most effective and economical protection for Fruit, Shade and Ornamental Trees against all crawling insects such as Canker Worms, Climbing Cut Worms, Ants; and the caterpillars of the Gypsy, Brown Tail and Tussock Moths. Prices, 6 oz. can 25c; 1 lb. can 60c; 5 lb. can \$2.75; 10 lb. can \$5.25; 25 lb. pail \$11.00.

FERTILIZERS

The need for different formulas of Fertilizers is based on the needs of the plants. Nitrogen, sometimes called Ammonia, produces the leaves, Phosphoric Acid, enlarges the flowers and fills out the seeds and Potash makes the roots and stiffens the plant stem. Which fertilizer to use should be governed by the results sought, most plants requiring some of each of the above elements but varying in the percentage. We handle the following list and make the analyses speak for each formula but should add by way of caution that the higher the analysis the stronger the product and the more care should be used to follow directions in order to avoid burning. The figures given represent the percentage of Nitrogen, Phosphoric Acid and Potash respectively and always in the same order.

Triple XXX Soil-Bil-Der. 10-6-4. 5 lbs. 50c; 25 lbs. \$1.50; 50 lbs. \$2.75; 100 lbs. \$5.00; ton \$80.00.

Lawn-Garden Pure Bone Fertilizer. 1.65=27=0. 5 lbs. 40c; 25 lbs. \$1.10; 50 lbs. \$2.00; 100 lbs. \$3.50; ton \$58.00.

Pulverized Sheep Manure. 2=1-2. 25 lbs. \$1.00; 50 lbs. \$1.75; 100 lbs. \$3.00; ton \$48.00.

Pure Raw Bone Meal Fertilizer. 3.70=20=0...100 lbs. \$4.00; ton \$72.00.

Soil-Bil-Der. 4-12-1. This is Sheep Manure with chemicals added to comply with the new State Fertilizer Law. 25 lbs. \$1.25; 100 lbs. \$3.50; ton \$58.00.

Nitrate of Soda. 16% Nitrogen. Dissolve one teaspoonful in a gallon of water and sprinkle on the ground around the plants. 1 lb. 20c; 5 lbs. 60c; 25 lbs. \$2.25; 100 lbs. \$4.50.

Nitrate of Potash. 14=0=44. Highly concentrated. Use one teaspoonful to one gallon of water on the ground around the plants. 1 lb. 25c; 5 lbs. \$1.00; 25 lbs. \$4.00.

Sulphate of Ammonia. 25½% Ammonia. Highly efficient to destroy weeds, such as Dandelions, Chickweed, etc., in the lawn and to use as a fertilizer. 1 lb. 15c; 5 lbs. 50c; 25 lbs. \$1.25; 100 lbs. \$4.00.

Agricultural Lime. Use 1 lb. to 5x10 feet on acid soil once in five years and if very acid use not over twice as much. 50 lbs. \$1.00.

PLANTABBS ODORLESS PLANT FOOD TABLETS 11-15-20. Highly concentrated and pressed into small tablets to put, one in a five-inch pot once a month. Box of 30, 25c; by mail, 28c; 75 for 50c; by mail 56c; 150 for \$1.00; by mail \$1.07.

Superior Plant Food. 11½=6=8. High grade article intended for potted plants. 7 oz. tin, 50c; by mail 56c; 16 oz. tin \$1.00; by mail \$1.08.

Muriate of Potash. 48% Potash. For tubers and root crops and to make plants sturdy. 1 lb. 20c, 5 lbs. 60c, 25 lbs. \$2.00.

Sulphate of Aluminum. Used around Rhodendrons and Azaleas to keep the soil acid. 1 lb. 25c, 5 lbs. \$1.00.

Manure! More Manure!

You must have manure, and thanks to ADCO you can have quantities of it. You can turn every bit of vegetable refuse—cuttings, weeds, leaves, etc., from the garden, straw and cornstalks from the farm, into rich manure by the simple ADCO Process. Information free.

ADCO is a chemical preparation much like lime that is successfully used to reduce waste vegetable matter to usable compost in one season. A pit or a large enough box is gradually filled with refuse and sprinkled periodically, layer by layer with ADCO and kept moist. 25 lbs. \$2.25, 150 lb. sack \$11.50. Delivery extra.

GRANULATED PEAT MOSS

The more we observe and use this recent addition to aids in successful gardening the more enthusiastic we become. It has innumerable uses, such as lightening heavy soil, covering small seeds, mulching plants and shrubs during the summer to retain moisture, and in winter to prevent heaving, spreading on the lawn after seeding and fertilizing to protect the seed until it sprouts, mixing with soil for potting, rooting cuttings, growing bulbs in the house in water and a bowl, in the chicken coop to conserve the droppings, in short it is almost as useful as the soil itself and practically assures success wherever and whenever it is used. Used with discretion a bale will last two or three years in the ordinary home garden, as it contains about 18 bushels when ready to use. A bale is 2x2x3 feet. Price, 1 bale \$4.25, 5 bales at \$4.00, 10 bales at \$3.75 each. If taken, 50c per bale reduction will be allowed.
